Category: Red Cell: Hemolytic Anemia (HA) > Autoimmune Hemolytic Anemias > Cold-active antibodies > Cold agglutinin disease (CAD) > Secondary CAD > Lymphoproliferative diseases

Description: Peripheral smear from a patient with a diagnosis of Cold Agglutinin Disease is shown. Laboratory data included a cold agglutinin titer of 1:256 and the presence of an IgM kappa restricted monoclonal protein in his serum. The patient was subsequently diagnosed with a small lymphocytic lymphoma.
